

**VIDYABHARTI TRUST COLLEGE OF BUSINESS,
COMPUTER SCIENCE & RESEARCH. UMRACH**

Title: Internship Documentation

Student Name: Jangid Devkumar p.

Enrollment Number: E23110458000910051

Program Name (B.C.A.)

Name of Internship Company: UpGrowth Infotech

Internship Duration : 15 Nov 2025 to 12 Jan 2026

Internship Coordinator

Prof.

Principal

Dr. Snehal H. Mistry

Internship Report

At

UpGrowth Infotech

Submitted in partial Fulfilment of

The requirement for the Degree of

BACHELOR OF COMPUTER APPLICATION

SUBMITTED BY:

Name of Student	Sem.	Seat No. TYBCA (SEM-6)	SPID
Jangid Devjumar P.	6th	8732	2023025259

UNDER THE GUIDANCE OF

Faculty Mentor Name (In Capital Letters)

SUBMITTED TO

Vidyabharti Trust College of Business, Computer-Science & Research

UmraKh, Bardoli - 394601

(December - 2025)

ACKNOWLEDGEMENTS

At this point, when I am about to finish internship project work, it is my privilege to thank all those people for their contribution to this Internship.

Firstly, I wish my heartfelt thanks to the principal of this college **Dr. Snehal H. Mistry**, who always motivates to fulfil my dreams and leads in the direction of growth. She has given her valuable input for the effective completion of this project.

Next, I would like to thank our IQAC Coordinator, **Mrs.** , who always works and thinks in the direction of betterment of the students and the institute, as well as supporting with all the necessary resources to finish our three golden years of graduation.

I thank **Mr. Sunil Agrawal** for his/her valuable and continuous guidance for the preparation of the Internship Training report.

I am grateful to **Prof. Nidhi Patel**, In-charge of the PG program, for his continuous support and valuable insights.

I am grateful to **Dr. Amit Patel**, HOD & In-charge, BCA Department for his continuous support.

I also would like to thank **Dr. Priti Desai**, Internship Coordinator and **Dr. Darshana Shah**, Placement Coordinator for providing valuable insights, timely guidance, and encouragement.

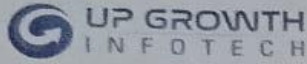

I cannot forget the contribution of my internship guide **Faculty Mentor Name** without the support of whom I would have never completed this Training. His/ Her constant help, guidance, and continuous teaching have given so many inputs on the academic as well as non-academic front.

Company Profile

- **Name of Company** : UpGrowth Infotech
- **Address** : bardoli, Gujarat, India
- **Website** : www.upgrowthinfotech.com
- **Year of Establishment** : 2023
- **Nature of Business** : Software Development Company

Vision

To become a trusted technology partner by delivering innovative, scalable, and high-quality software solutions that help businesses grow in the digital era.

Mission

To design and develop reliable web applications and software systems using modern technologies, while ensuring quality, efficiency, and customer satisfaction.

- **Products/ Services Offered**
 - Custom Web Application Development
 - Website Development
 - Business Management Systems
 - Software Development Solutions
 - System Integration and Technical Support
- **Departments**

Development Team

- **Web Development Department**

Responsible for developing and maintaining web applications using modern technologies and frameworks.
- **Software Development Department**

Focused on building customized software systems and business management applications for clients.
- **Technical Support and Maintenance Department**

Handles system maintenance, troubleshooting, and provides technical support for developed applications.

- **Organizational Structure**

Name of Company	UpGrowth Infotech
Address	Bardoli, Gujarat, India
Website	www.upgrowthinfotech.com
Year of Establishment	2023
Nature of Business	Software Development Company
Vision and Mission	To become a trusted technology partner by delivering innovative, scalable, and high-quality software solutions that help businesses grow in the digital era.
Products/ Services Offered	Custom Web Application Development, Website Development ,Business Management Systems, Software Development Solutions, System Integration and Technical Support
Departments	Web Development Department, Software Development Department, Technical Support and Maintenance Department

Department Details

- **Department Name:**

Development Team (Engineering / Development Department)

- **Role of Department:**

The Development Team is responsible for designing, developing, and maintaining software applications according to client requirements. The team works on developing modern web applications, implementing system features, fixing bugs, and improving existing systems to ensure smooth functionality and performance.

- **Type of Projects Handled:**

- Web Application Development
- Software System Development
- Business Management Systems
- Maintenance and Enhancement of Existing Applications

Supervisor / Mentor Details

- **Name:** Hemin Patel
- **Designation:** Chief Technology Officer (CTO)
- **Department:** Project Management

Supervisor's Role in the Project:

The supervisor played an important role in guiding the internship project by providing technical mentorship and professional guidance. He helped in understanding the project requirements and guided the development process according to the Software Development Life Cycle (SDLC).

The supervisor regularly reviewed the project progress, provided feedback on the implementation, and suggested improvements based on industry standards. Through discussions and code reviews, the supervisor helped improve problem-solving skills and understanding of real-world software development practices.

Objectives of Internship

Academic

- To apply theoretical knowledge gained during academic studies to real-world software development projects.
- To gain practical exposure to modern web development technologies such as Angular, backend development, and database integration.
- To understand the Software Development Life Cycle (SDLC) and how software projects are developed and managed in the IT industry.

Skill Objectives

- To improve programming and debugging skills while developing real-world web applications.
- To learn how to design, develop, and integrate different modules of a software system.
- To gain experience in preparing project documentation and understanding development workflows used in professional environments.

Personal Learning Objectives

- To improve discipline, responsibility, and time management while working on project tasks.
- To develop problem-solving abilities by identifying and fixing technical issues during development.
- To enhance communication and teamwork skills while working with developers and mentors in a professional environment.

Introduction of Internship Work

This internship was completed at Upgrowth Infotech, Bardoli, in the Development Team as a Trainee Full Stack Developer Intern. During the internship, I worked on a real-world web application project and gained practical experience in modern software development technologies and development processes used in the IT industry.

The internship involved understanding the system architecture, setting up the development environment, and implementing different modules of the application. I worked on both frontend and backend development, including API creation, database integration, user interface development, and application testing. Through this experience, I learned how different components of a full-stack web application interact with each other to build a complete and functional system.

During the internship, technical guidance and mentorship were provided by the supervisor, who explained practical aspects of software development and helped in understanding how real-time projects are developed and managed in the IT industry. The supervisor also guided the development process, reviewed the progress of the project, and suggested improvements according to industry standards.

The internship was conducted in hybrid mode, where technical guidance and discussions were provided through meetings and regular communication with the development team. Periodic office visits were also conducted to review project progress and demonstrate implemented features. This process helped in understanding professional development workflows, teamwork, and real-world software, development practices followed in the IT industry.

Description of Work Done (Main Body)

Daily Work Description

Date	Work Done / Task	Technology Used
17/11/2025	Company orientation and introduction to internship program	Discussion
18/11/2025	Introduction to development team workflow and project overview	Discussion
19/11/2025	Study of Software Development Life Cycle (SDLC) and Agile methodology	Study of Software Development
20/11/2025	Understanding application architecture and system modules	Observation
21/11/2025	Introduction to project: Clock In / Clock Out Management System	Management System Discussion
22/11/2025	Weekly meeting and discussion with mentor regarding project tasks	Discussion
24/11/2025	Setup of development environment (VS Code, Node.js, Angular CLI, Git)	Node.js, Angular CLI
25/11/2025	Learning basic TypeScript and Angular project structure	Angular

26/11/2025	Backend server setup and project folder structure creation	Node.js, Express
27/11/2025	Database design and creation of collections for clock records	Firebase / Firestore
28/11/2025	Study of REST API structure and API request handling	Node.js, Express
01/12/2025	Development of basic CRUD APIs for clock records	Node.js, Express
02/12/2025	Integration of backend APIs with Firebase database	Firebase, Express
03/12/2025	API testing using Postman	Postman
04/12/2025	Debugging backend APIs and fixing errors	Node.js
05/12/2025	Creating frontend project structure and Angular components	Angular
8/12/2025	Designing UI for Clock In / Clock Out pages	Angular, HTML, CSS
09/12/2025	Implementing Angular services for API communication	Angular

10/12/2025	Integration of frontend with backend APIs	Angular, Node.js
11/12/2025	Implementation of reactive forms and validation	Angular
12/12/2025	Creating clock records listing and edit functionality	Angular
15/12/2025	Implementing clock start and stop features	Angular, Node.js
16/12/2025	Debugging frontend modules and fixing integration issues	Chrome DevTools
17/12/2025	Testing system functionality and resolving errors	Browser Testing
18/12/2025	Learning version control and project updates using Git	Git
19/12/2025	Performance testing and code improvements	Angular
22/12/2025	End-to-end testing of application modules	Node.js, Angular
23/12/2025	Debugging application and resolving bugs Node.js	Node.js
24/12/2025	Improving UI design and responsiveness	HTML, CSS

25/12/2025	API optimization and error handling improvements	Node.js
26/12/2025	Preparation of project documentation	MS Word
29/12/2025	Learning deployment process for web applications	Firebase
30/12/2025	Deploying application on Firebase Hosting	Firebase
31/12/2025	Testing deployed application and fixing deployment issues	Firebase
01/01/2026	Learning cloud deployment workflow and project management	Discussion
02/01/2026	Practicing API integration and testing modules	Postman
05/01/2026	Debugging application modules and performance optimization	Angular
06/01/2026	Final project testing and validation	Browser
07/01/2026	Preparation of project documentation and diagrams	MS Word
08/01/2026	Final review meeting with mentor	Discussion
09/01/2026	Final project submission and presentation preparation	Documentation

Modules / Tasks Completed

Module 1: Dashboard & Navigation System

This module was developed to manage overall application navigation and provide a centralized dashboard view.

- Designed and implemented **Side Menu (Dashboard, Task, Clock In/Out, Employee, User, Reports, Profile, Settings)**
- Customized header by removing unnecessary options
- Developed dashboard component to display data using multiple APIs
- Managed routing and navigation across different modules

Code Sample (Screenshot Recommended):

DashboardComponent.ts / SidebarComponent.ts

Module 2: Employee Management System

This module allows managing employee records within the application.

- Created Employee component and designed UI form
- Implemented **Add, Edit, and Delete Employee functionality**
- Integrated backend APIs for employee data management
- Displayed employee listing with task percentage updates

Module 3: Clock In / Clock Out System

This module is used to track employee working hours and task activity.

- Developed Clock In / Clock Out component with form integration
- Connected employee and task APIs with clock module
- Implemented **Edit and Delete functionality for clock records**
- Enhanced UI using form groups and SCSS

Module 4: Task Management System

This module handles task creation, updating, and management.

- Created Task component and designed task form
- Implemented **Add, Update, and Delete Task functionality**
- Integrated backend APIs for task operations
- Improved UI and user experience using SCSS

Module 5: Reports & User Role Management

This module helps in generating reports and managing user permissions.

- Developed Reports module and implemented all features
- Created Dashboard reports by integrating multiple APIs
- Implemented **Role-Based Access Control (RBAC)**
- Managed user permissions based on roles

Tools & Technologies Used

- **HTML, CSS** – User interface design
- **PHP** – Backend development
- **MySQL** – Database management system
- **XAMPP** – Local server environment
- **Web Browser** – Application testing
- **MS Word** – Project documentation

Weekly Summary Report

Week 1

- Joined the internship program at **Uppgrowth Infotech**.
- Attended orientation and understood company structure and team roles.
- Learned about development workflow and communication process within the team.

Week 2

- Studied **Software Development Life Cycle (SDLC)** and Agile methodology.
- Understood Scrum process and project workflow used in the company.
- Learned about real-world software development practices.

Week 3

- Learned about **Three-Tier Architecture** (Frontend, Backend, Database).
- Understood Angular (Frontend), Node.js/Express (Backend), and Firebase/MongoDB (Database).
- Analyzed interaction between frontend, backend, and database.

Week 4

- Set up development environment (VS Code, Git, Node.js, Angular CLI).
- Learned project structure and basic TypeScript concepts.
- Prepared system for full-stack development.

Week 5

- Developed backend APIs using **Node.js and Express.js**.
- Implemented CRUD operations and tested APIs using Postman.
- Integrated Firebase / Firestore database with backend.

Week 6

- Developed frontend using **Angular components and services**.
- Designed UI for Task, Employee, and Clock In/Out modules.
- Integrated frontend with backend APIs.

Week 7

- Implemented modules such as **Task Management, Employee Management, and Clock In/Out system**.
- Added features like Add, Update, Delete, and Listing functionality.
- Improved UI/UX using SCSS and form groups.

Week 8

- Performed testing and debugging using **Chrome DevTools and Postman**.
- Fixed bugs and improved application performance.
- Deployed application using **Firebase Hosting and Vercel**.
